According to a 2017 market research report by Visiongain, based on 2017 data, AutoCAD is the world's most popular parametric software, used by 11% of the global CAD community. Among CAD professionals, AutoCAD holds a 49.8% market share, with ArcGIS (13.8%), SolidWorks (13.7%), and Creo (6.8%) holding the next highest shares. As for the last five years, it was found that the total number of AutoCAD users worldwide had increased from 4.3 million in 2011 to 5.5 million in 2016, representing a CAGR of 6.9%. AutoCAD is a powerful and complex program for professional 2D and 3D drafting, design, and data management. It provides CAD users with the ability to view, draw, and manipulate the topology of 2D and 3D objects, as well as to perform basic programming and database manipulation tasks. 2D CAD allows you to create a wide variety of 2D drawings, including architectural and mechanical layouts. AutoCAD has become a standard tool in the development of many products. It is used by architects and engineers to create a 3D model, or construction set, of a building or any other structure. This is done to visualize the design before it is built, to illustrate it to the client, and to create a 3D model for 3D printing. You can use AutoCAD to create 3D models of machinery, including vehicles. How does AutoCAD work? AutoCAD is a powerful, object-oriented, computer-aided drawing (CAD) program. It is designed to solve complex problems and make it easier to create sophisticated 2D and 3D drawings. AutoCAD is a suite of computer software that includes AutoCAD 2016, 2017, 2019, and 2020, AutoCAD Architecture, AutoCAD Architecture LT, AutoCAD LT, AutoCAD Map 3D, AutoCAD Map 3D LT, and AutoCAD Web; AutoCAD Rulers; and AutoCAD 360. It also includes SoftTracks 2D, Inventor, and Magics. AutoCAD can be used to produce drawings of a wide variety of objects, including 3D models. It provides the following components:

AutoCAD® 2020 now includes Markup Assist, which simplifies the process of marking up work. Markup Assist was originally designed for you to add notes and annotate your drawings for quality control and correction purposes, but today, it can be used for feedback that is more rapid, specific and relevant. Import a text file from the Web, PowerPoint, Word, or other source to add text comments, notes and comments to your drawings. Markup Assist uses the standard drawing symbols to highlight the text on screen. You can select the text you want to markup and then choose from a variety of drawing symbols to highlight it. You can also enter comments directly into the drawing. (video: 1:26 min.) Markup Assist helps you to design more easily by automatically importing comments from existing files. You can import comments from other drawing files, including standard symbols. (video: 1:34 min.) Make changes to the markup without creating a new drawing. Automatically open another drawing and apply your changes without manually re-importing the markups. You can also view changes to your existing drawing before importing them. (video: 1:59 min.) Screenshots of markups imported from different files Markup Import and Markup Assist are powerful tools for interacting with design data from the Web, PowerPoint, Word, and other sources. With Markup Assist, you can import text comments, notes, and other information, such as dimensions, from any source and apply those changes to a drawing without manually re-importing them. You can now import markups from other files. The markups can be visualized in both 2D and 3D views, so you can easily see the effects of your changes. You can apply the marks to any view in the drawing. Once the changes have been applied, you can export those changes to an external drawing as a comment on a block. You can import the comment and apply it to the drawing as a change. You can also add the changes to your collection of custom design data. You can also add comments to the drawing from other files. You can import comments to mark a design error, to add documentation to the file, or to share an idea with someone else. Markups are easily shared by exporting them as a comment. You can import the comment into your collection of custom design data and you can also export it to an external drawing.
