SolveX Free Download (2022)

SolveX is a straightforward tool that can help you find various words, even if you only know a limited number of the characters they contain, as well as list all the possible anagrams that can be obtained from rearranging the characters in a particular word. Search for matching words The application includes an extensive built-in dictionary that it can scan to find various words. To achieve this, you can enter the word you are looking for in the search box, then replace unknown characters with any non-alphabetic keyboard symbol. The application then searches the included dictionary for any words that match the inserted character sequence. This function can be very useful for completing crossword puzzles, as you often find yourself having to guess a particular word, without knowing all the characters that make it up. Find anagrams SolveX can also display anagrams of words inserted in the search box. The results are listed in the application's main window and you can choose whether they should be displayed in upper or lower case. Create a personal dictionary While the program includes a comprehensive list of words, many new or technical terms may not be included in its dictionary. To remedy this issue, you have the option of adding any number of new words to a user dictionary. Additionally, you can choose which of them should be scanned when searching for words or anagrams. However, it would be useful if the application offered an easy way of adding complete dictionaries. This would be especially helpful for users who need to find words in other languages. Overall, SolveX is a lightweight and easy-to-use tool, designed to help you find words that match certain character sequences, as well as anagrams. What's New In SolveX?

This is a simple application designed to help you find words that match certain character sequences. For example, you can type in the characters "h" and "i" to find words containing both of them, while using "l", "o" and "s" to find words containing each of those. Additionally, you can insert any number of characters and the program will find matching words. The application can also search for anagrams of a specific word by typing its characters in a certain order. Additionally, SolveX can display anagrams of words that match a specific character sequence. For example, typing "e" and "c" followed by "l" and "e" would display all of the possible anagrams of "cells". If you would like to create your own dictionary, you can do so from the application's main window. To view the results, type "e" and "s" in the search field. Creating a custom dictionary If you wish to add a custom dictionary to SolveX, simply type "d" into the search field. Once the new dictionary is added, you can choose whether you would like it to be searched before scanning the built-in dictionary or adding it to the list of dictionaries that SolveX can scan. Moreover, you can choose which dictionary to add to the application's list of dictionaries from a list of other dictionaries installed on your computer. This can be very useful when you often need to find words that match a certain sequence of characters, but don't know the exact wording. Main features: You can type any number of characters to search for words that match the specified sequence. If you only have a limited knowledge of the letters used in the word, you can enter the sequence of characters in which they appear and SolveX will search for matching words. For example, typing "h" and "i" will find words containing both characters, while using "l" and "o" will find words containing each of those. The program can also search for anagrams of a specific word by entering the characters in a certain order. If you know the word you want to find, you can specify a specific dictionary that SolveX can use to find matches. If you would like to find anagrams,
